Becker Sports Graphics: Player Shot Scorecards

Tim Becker & Matt Becker

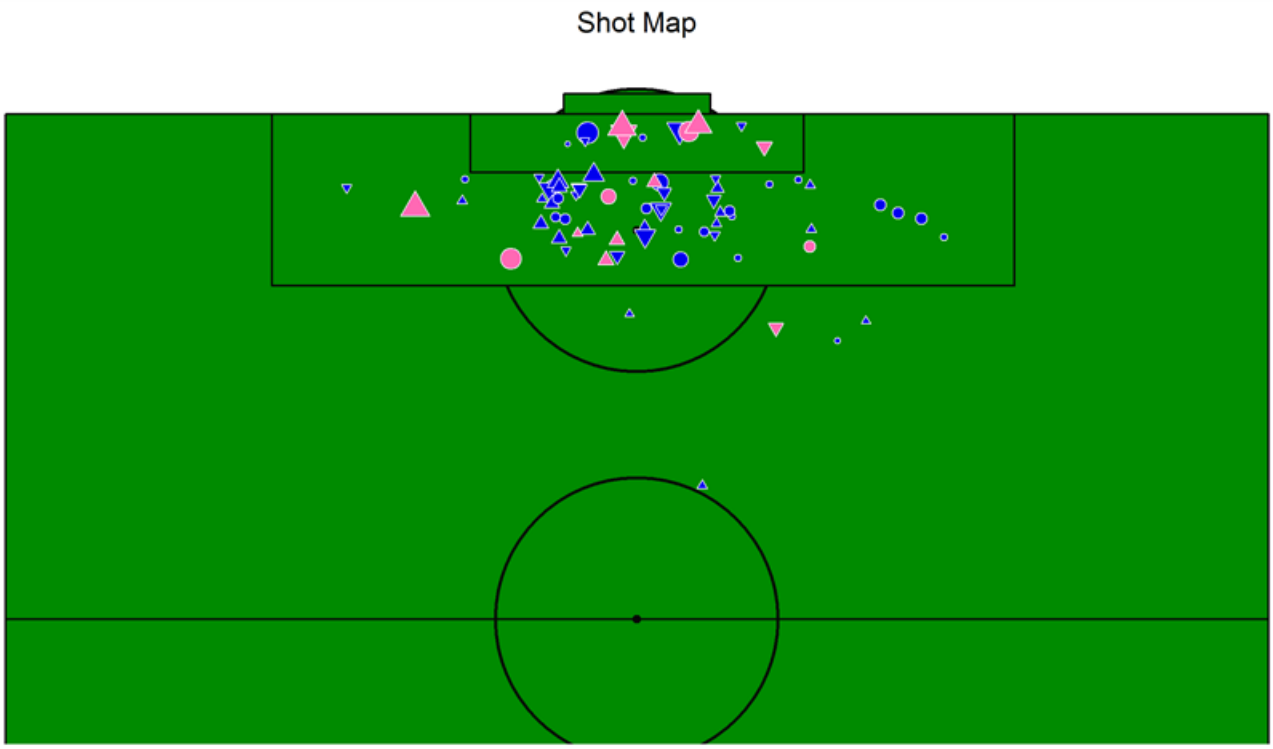

June 04, 2019

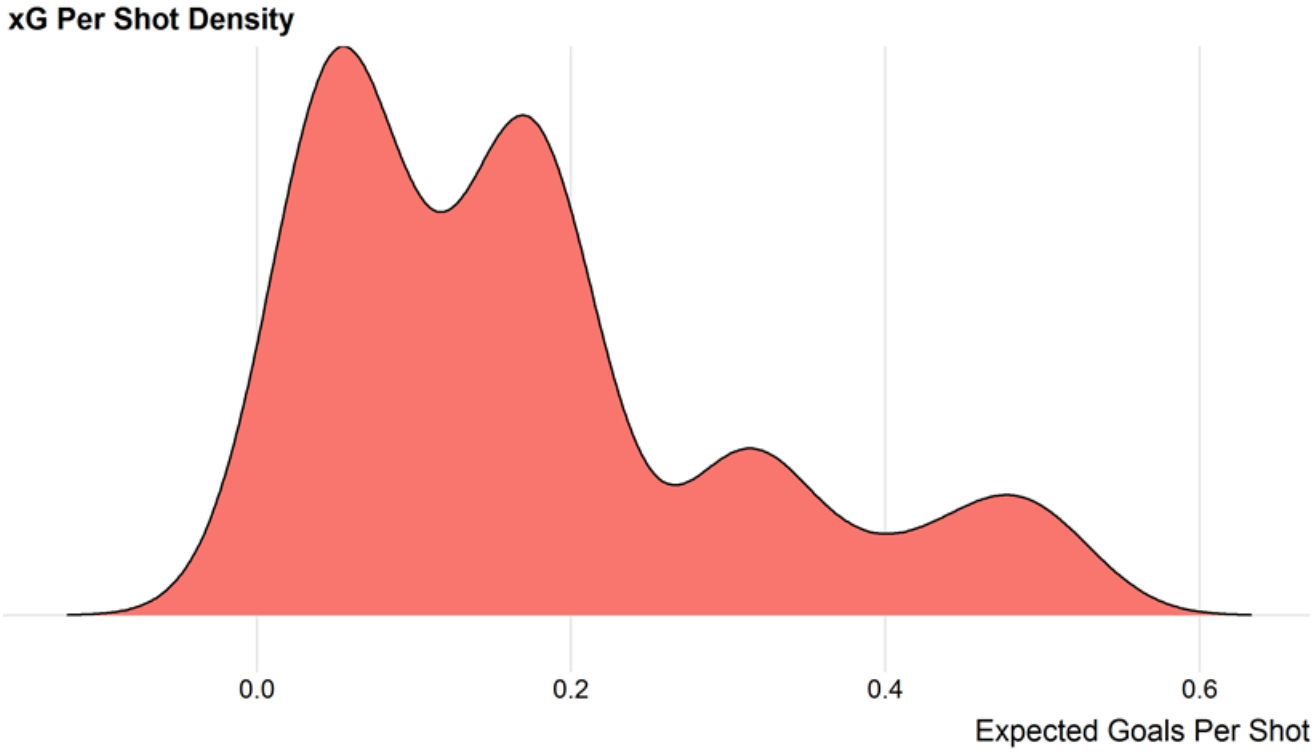

Glossary

- Radar Charts show the percentage of a player's shots that are taken matching each category. The outer edge of the radar is the maximum for each category. xG Per Shot and Goals Per Shot are the metrics based on quality of the player, while the other metrics are based on the location and game state of the player's shots.

- Shot Maps show all of the player's shots from the given season. The size of the shot is determined by the xG for that shot. We model xG per shot based on the chance of scoring a goal for that specific shot. Several variables are considered, including position on the field, body part, game play, and game state. Shots that are pink are goals, while the others are misses. An upper triangle indicates that the shot was taken while the player's team was winning. A lower triangle indicates that the shot was taken while the player's team was losing. A circle indicates that the show was taken while the match was tied.

- Ridgeline charts show the density of shots taken with each expected goal value. The individual player is shown next to the three most similar players over the shot type & shot quality metrics.

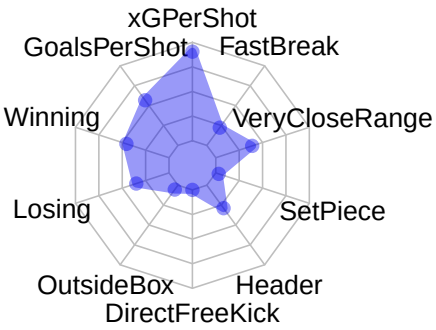

Metric	Category
xGPerShot	Shot Quality
GoalsPerShot	Shot Quality
Winning	Game State
Losing	Game State
OutsideBox	Shot Type
DirectFreeKick	Shot Type
Header	Shot Type
SetPiece	Shot Type
VeryCloseRange	Shot Type
FastBreak	Shot Type

These scorecards reflect shot data for 2018-2019 for each individual player in the top 5 European Leagues who took at least 25 shots.

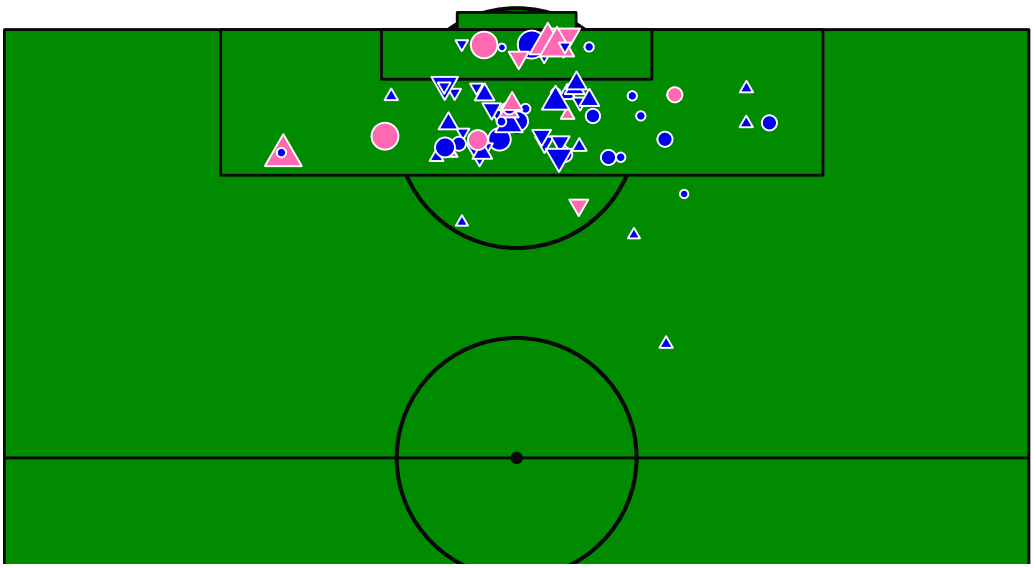

Jamie Vardy, Leicester City, 14 Goals from 74 Shots.

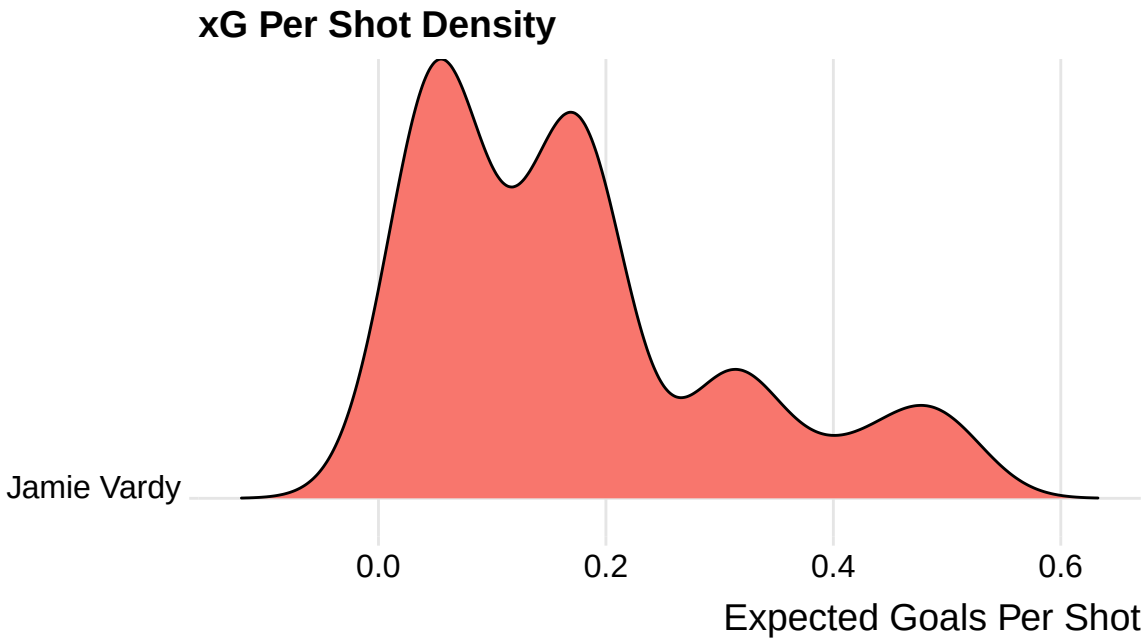

ShotQuality	Value
xG Per Shot	0.17
Goals Per Shot	0.19
